PROFESSIONAL SUMMARY

Recent B.Tech Information Technology graduate (2026, CGPA 8.73) with a strong foundation in Python, SQL, data structures and problem-solving. Hands-on experience through internships and projects in data analysis, machine learning and building AI-powered applications. Quick learner who enjoys turning real-world problems into working solutions, seeking an entry-level role where I can grow and contribute to a team.

TECHNICAL SKILLS

Languages & Core: Python, SQL, Object-Oriented Programming, Data Structures & Algorithms
Data Analysis: Pandas, NumPy, Exploratory Data Analysis (EDA), Feature Engineering, Data Cleaning, Statistical Analysis
Machine Learning & NLP: Scikit-learn, Imbalanced-learn, Optuna, Sentence Transformers, spaCy, Model Evaluation, Hyperparameter Tuning
Generative AI & LLMs: LLMs, Prompt Engineering, RAG, LangChain, Google Gemini API, FAISS, ChromaDB, Conversational AI
Tools: Git, GitHub, REST APIs, Streamlit, Jupyter Notebook

PROJECTS

ResumeLens AI – Generative AI Resume ATS Analyzer
Python, LangChain, Google Gemini API, FAISS, Sentence Transformers, spaCy, Streamlit

- Built a RAG application that scores resume–job description alignment and returns an ATS score, matched and missing skills, and improvement suggestions.
- Implemented semantic retrieval with FAISS and Sentence Transformers and refined prompts to improve the relevance of LLM-generated analysis.
- Designed a modular Streamlit app with separate retrieval, LLM and UI layers for maintainability.

Insurance Fraud Triage Engine – ML Classification Pipeline
Python, Scikit-learn, Pandas, Imbalanced-learn, Optuna

- Built an end-to-end pipeline to flag potentially fraudulent insurance claims and prioritize high-risk cases for review.
- Applied leakage-resistant preprocessing and class-imbalance handling; used Optuna hyperparameter tuning to improve fraud-class recall.
- Evaluated models with precision and recall metrics, prioritizing fraud-class recall to reduce missed fraudulent claims under class imbalance.

RAG-Based Document Q&A Chatbot
Python, LangChain, Google Gemini API, ChromaDB, RAG

- Built a RAG pipeline that extracts text from PDFs, chunks it, stores embeddings in ChromaDB and answers questions from the retrieved context.
- Grounded Gemini's answers in retrieved passages to reduce unsupported responses, and kept each stage modular so it can be tested separately.

EXPERIENCE

AI/ML & Data Science Trainee | PySpiders *Jan 2026 – Sep 2026*

- Developed and evaluated Generative AI and RAG workflows using prompt engineering and model evaluation on business-style use cases.
- Delivered project-based Python, SQL and Machine Learning assignments with debugged, documented, version-controlled code.

Data Analytics, AI & ML Intern | Novi Tech *Jun 2025 – Aug 2025*

- Cleaned and preprocessed real-world datasets with Python and Pandas, and performed EDA to prepare data for ML and NLP workflows.
- Trained and evaluated Scikit-learn models, analyzing precision, recall and other metrics to guide iterative improvement.

EDUCATION

B.Tech, Information Technology | Arunachala College of Engineering for Women, Anna University *2022 – 2026*
CGPA: 8.73

Higher Secondary | Little Flower Girls Higher Secondary School *2020 – 2022*
Percentage: 86.5%

CERTIFICATIONS

- Applied AI & Machine Learning – Associate Readiness, OneRoadmap (Sep 2026)
- Fundamentals of LLMs – The LLM Course, Hugging Face Instructors (Sep 2026)
- Foundations: Data, Data, Everywhere – Google, Coursera (Sep 2025)
